

Wizards Training

Advanced QA Automated Tools Training Course Curriculum

Duration: Four Weekends/ Sat & Sun: 9.00am – 1.00pm or 1.00pm – 5.00pm Weekdays - Mon, Wed, Fri: 6.30pm – 9.30pm or Tue, Thu: 6.30pm – 9.30pm

Writing VBScripts

Record and Play

Writing and Executing simple vbscripts in qtp

Creating Procedures and Functions

Creating and Calling QTP libraries script dynamically or manually

Loading Object Repository during RunTime

Using methods for different webedit objects etc

Data Sets

VBScript to retrieve and save data from data table

Calling and Modifying external data sheets in QTP

VBScript to use Excel Objects in QTP

Check Points

Adding Checkpoints during runtime

Error Handling

Using different objects for error handling

Excel Object Error Handling

Recovery Scenarios

Creating Recovery Scenario

VBScript to add recovery scenario during run time

VBScript to add test settings during run time

Connecting Quality Center

VBScript to connect to Quality Center

VBScript to upload results to Quality Center

FrameWorks

Data Driven FrameWork

- Parameterization in vuser scripts

-

Introduction and Understanding different protocols supported in VUGen

-

Understand and Setting VUGen environment

-

Creating, running and organizing scripts in virtual generator

-

Adding Application response time, Rendezvous at app and DB level, Inserting Comments in scripts

Understand the need to parameterize data

Creating parameters in vuser scripts

Using different techniques of parameterization

Training Location: 1039 Sterling Road, Ste. 103, Herndon-VA-20170. USA.

Ph: 703-263-7278, 703-968-6268 Fax: 703-935-8849 training @wizardsedu.com

(Behind Fuddruckers @ Cross Roads of Dulles on Elden Street)

Wizards Training

Advanced QA Automated Tools Training Course Curriculum

Duration: Four Weekends/ Sat & Sun: 9.00am – 1.00pm or 1.00pm – 5.00pm Weekdays - Mon, Wed, Fri: 6.30pm – 9.30pm or Tue, Thu: 6.30pm – 9.30pm

-

Virtual User Generator

-

Controller

-

Understanding the logistics behind scenarios

-

Components of Controller and setting up scenarios

-

Setting up Windows monitors

-

Scheduling a scenario includes Setting up a scenario, Adding vusers, assigning groups to different load generators, managing different options in controller.

-

Monitor scenario for performance monitors, vuser monitors.

-

Stop a scenario and Results Configuration

-

Load Runner Installation

Pre and Post Installation

VBScript Coding standards

File Naming Conventions

Variable Naming Conventions

Adding Comments to the functions

ADVANCED LOADRUNNER CURRICULUM

-

Types of load testing

-

Volume testing, Performance Testing, Load Testing

Introduction, Real time usage & Scenarios,

-

Training Location: 1039 Sterling Road, Ste. 103, Herndon-VA-20170. USA.

Duration: Four Weekends/ Sat & Sun: 9.00am – 1.00pm or 1.00pm – 5.00pm Weekdays - Mon, Wed, Fri: 6.30pm – 9.30pm or Tue, Thu: 6.30pm – 9.30pm

Differences in types of testing and planning, scheduling, Coordinate a load test

Components of Load runner

Real time scenarios during load testing

Discussion of real time scenarios faced during testing of real business application

Advanced Quality Center

- Installing Quality Center
- Creating and Managing Domains, Projects, Groups and Users.
- Writing VBScript to customize Projects
- Writing VBScripts to generate reports from Quality Center tables
- Creating and Modifying Environment Variables
- Troubleshooting problems related to Configuration, User Setup and VBScript
- Connecting to Quality Center using VBScript
- Uploading Data files and QTP scripts to Quality Center using VBScript
